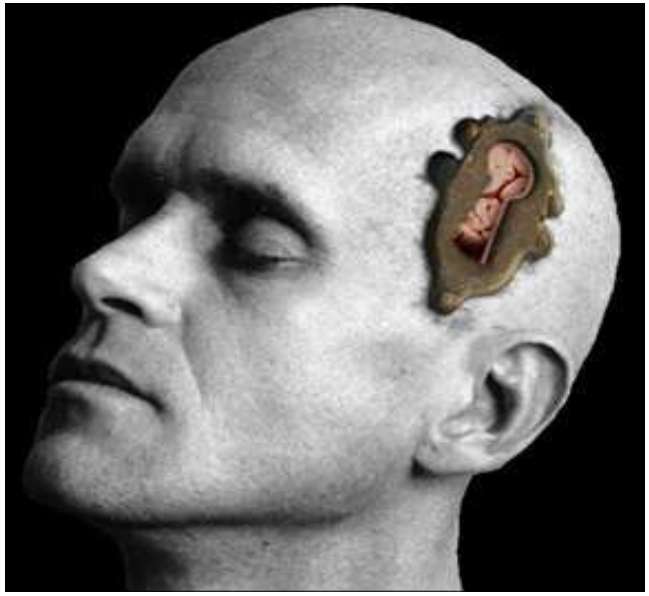
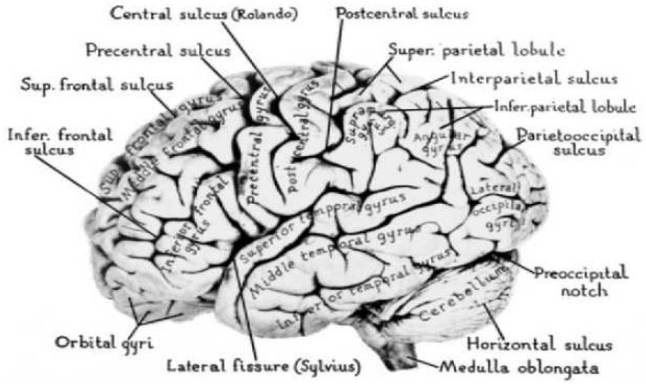
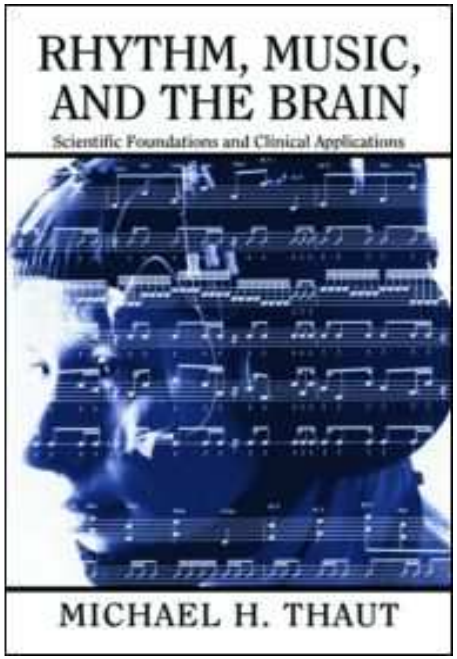
NEUROLOGIA & MUSICA



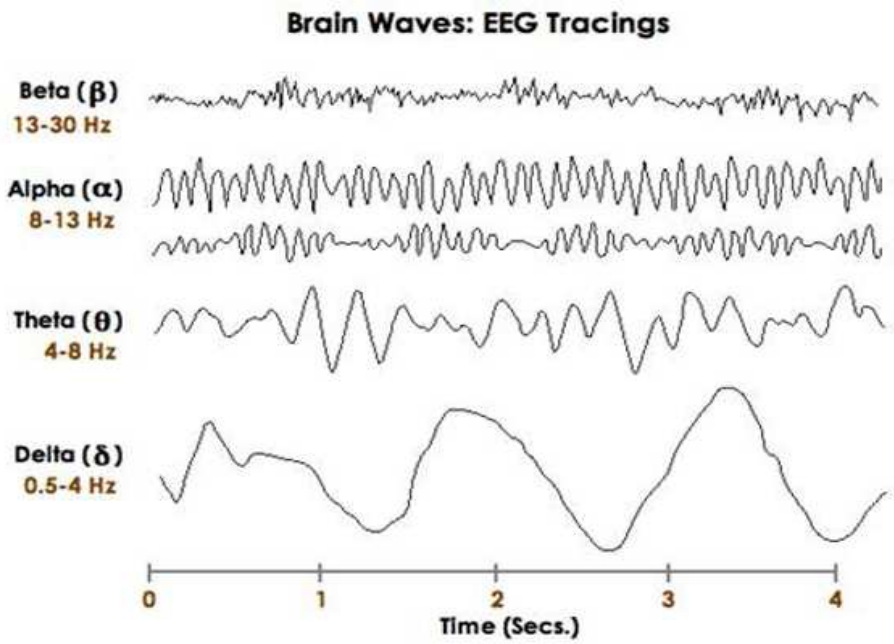


Dott. Patrik Fazio 26 Maggio 2012. Società Medico Chirurgica di Ferrara.

Musica, cervello e neurologia



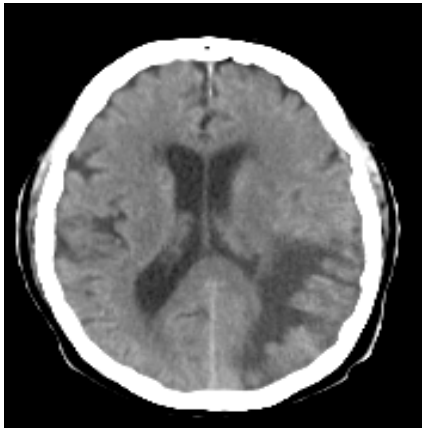
The Rhythmic Brain



*"La stessa struttura della "musica" (**in termini di composizione temporale e di frequenza**) è apparentemente direttamente correlata alle dinamiche di sincronizzazione e funzionamento di decodifica neurale".*

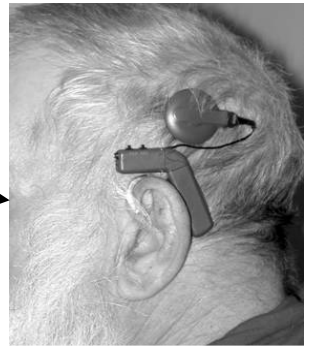
NEUROLOGIA & MUSICA

Danno cerebrale focale acquisito:
Vascolare, tumore,
traumi, forme di demenza



Anomalie congenite:
Amusia congenita,
Sindrome di Williams

Ipoacusie, anacusie:
(sordità): impianti cocleari.



Le patologie neurologiche possono determinare sia fenomeni positivi che fenomeni negativi

Fenomenologie positive

Epilessia musicogenica, crisi epilettiche parziali uditive, allucinazioni musicali

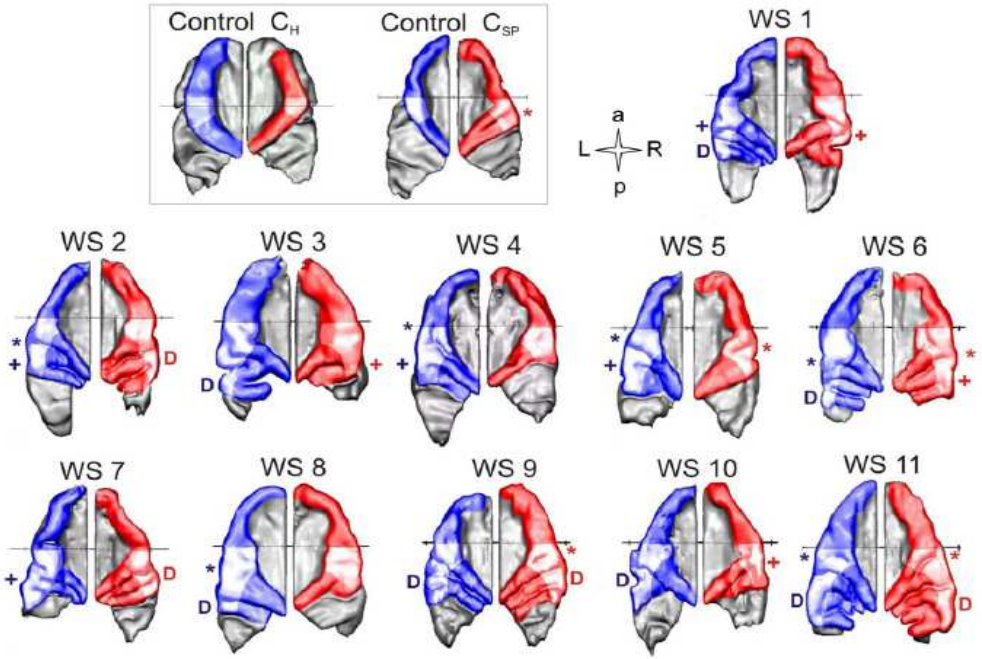
Fenomenologie negative Le Amusie

Disordini del Movimento

Sindrome di Williams

“ Good pitch, a sense of rhythm, singing, playing instruments, improvising and even composing “ (***Levitin DJ 2005***).

Processamento dei volti, socialità, linguaggio e musica.



Voxel based Morphometry. Increased gyrification of the auditory cortex in WS. *Wengenroth M. 2010. PLOS ONE.*

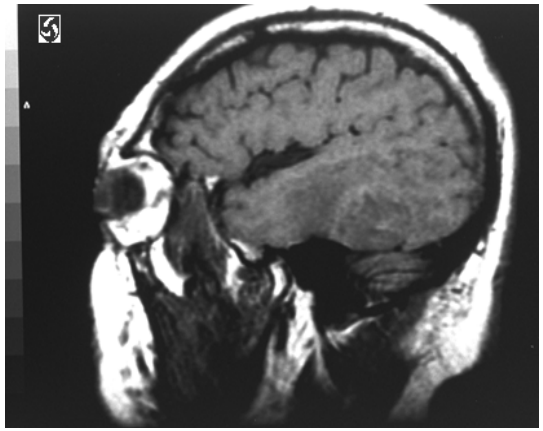
Ernesto Che Guevara fù uno dei più celebri amusici.

Amusia Acquisita e Congenita

L'**amusia** (dal greco *a-musía*, mancanza di armonia) è l'incapacità biologica di comprendere, eseguire ed apprezzare la musica.

L’ "amusico" non è in grado di comprendere l'altezza delle note né di distinguere una melodia da un'altra.
Difficoltà nel seguire un ritmo, sentire, udire sia la voce che la musica come monotonali.
Nei casi più gravi, gli amusici non sono capaci di sentire la musica o la trovano irritante e sgradevole.



Amusia o Agnosia Musicale

***Capacità Motorio/Espressive**:*

- Cantare
- Mimare uno strumento (Hum) o fischiare (**Amusie espressive**)
- Suonare uno strumento (**Aprassia musicale o strumentale**)
- Scrivere musica (**Agrafia Musicale**)

***Dominio recettivo** :*

- Discriminazione tonale
- Identificazione di brani familiari (**Amusia recettiva**)
- Leggere musica (**Alessia Musicale**)

Montreal Battery of Evaluation of Amusia (MBEA)

(Peretz et al. 2003)

Comprensione e ricezione della musica :

Elementi tonali: tonalità, armonia, melodia, e il timbro.

Elementi temporali: ritmo e metrica.

Componenti emozionali:

Soggettiva risposta alla musica.

Memoria e capacità di **immaginazione** musicale.

Espressione musicale

Elementi tonali: tonalità, produzione di melodie.

Elementi temporali: ritmo.Elementi emozionali.

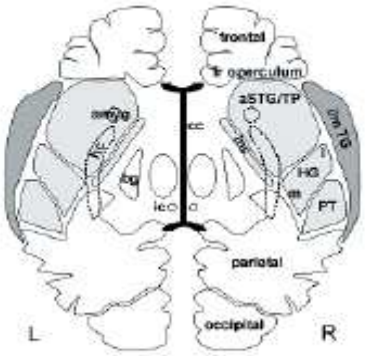
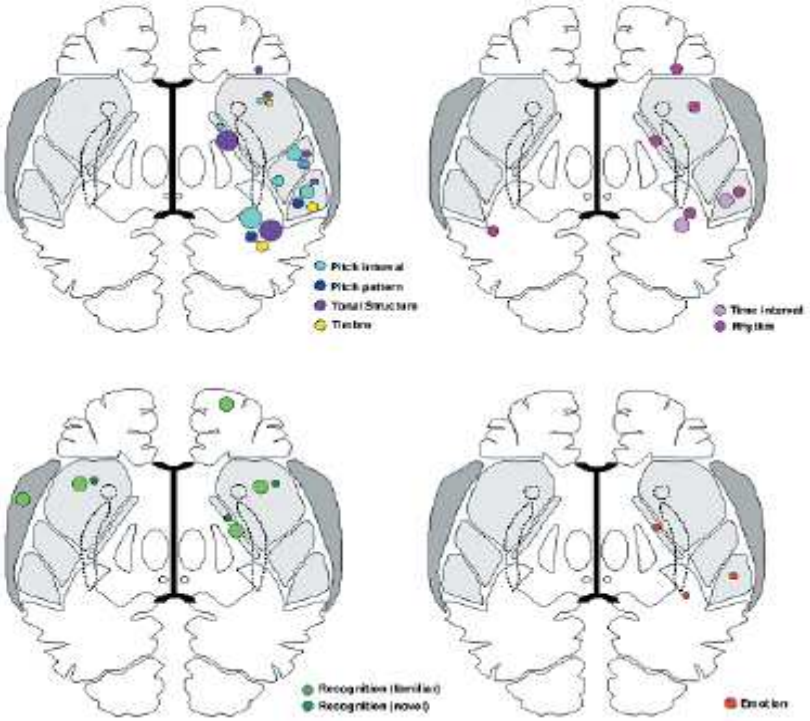
REVIEW ARTICLE

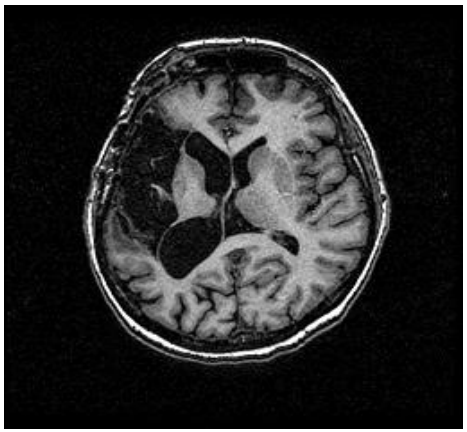
Music and the brain: disorders of musical listening

Lauren Stewart,[1,2,3] Katharina von Kriegstein,[1,3] Jason D. Warren[4] and Timothy D. Griffiths[1,3]

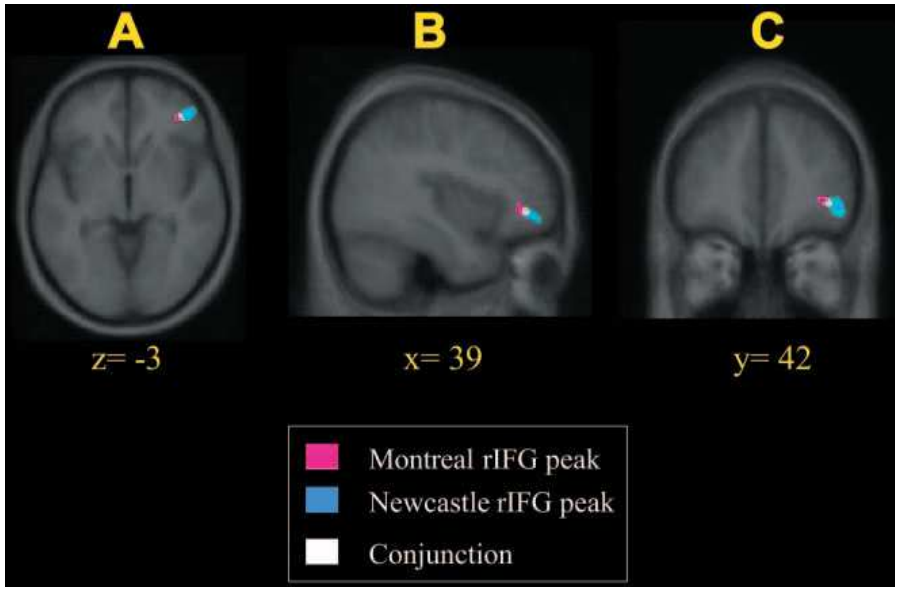




The corpus callosum. Superior-temporal plane. Middle/inferior temporal gyri.

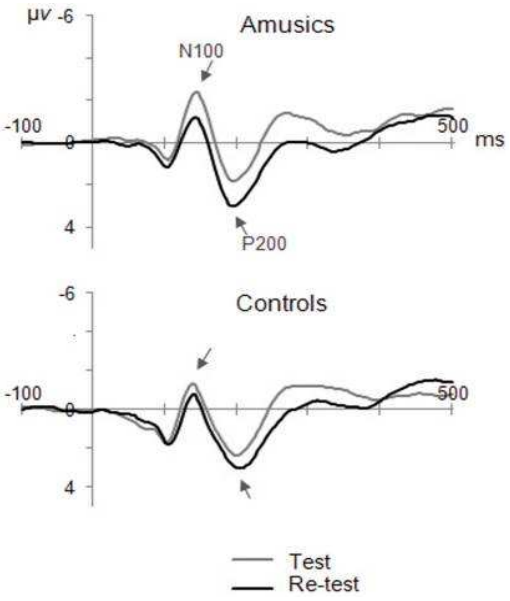


Amusia Congenita:recenti acquisizioni.



Hyde 2006

"Differenze morfometriche a carico della **Corteccia Frontale Inferiore** e nelle aree sopra il **Giro Temporale Superiore** bilateralmente".



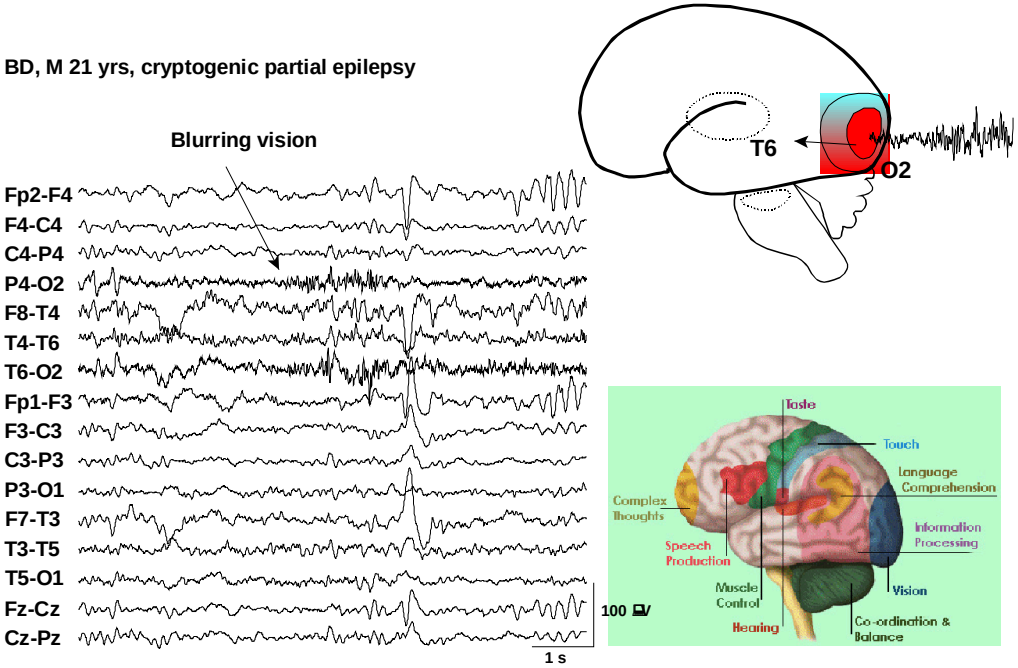
Early ERP in the amusic. Peretz 2012

Fallimento di ritenzione mnesica delle informazioni circa le differenze e I cambi di tono. (Peretz 2012).

La percezione musicale, per se, dipende dall'integrazione di eventi racchiusi nel dominio del tempo.

Epilessia Musicogenica

Crisi epilettiche indotte dai suoni (di solito prolungato) in combinazione melodica e/o armonica.
Circa 110 (dal1884 al 2007) casi riportati dalla letteratura scientifica.



Zifkin and Zatorre 1998, Avanzini 2001, Pittau 2011.

Allucinazioni musicali

L'**allucinazione** è una falsa percezione in assenza di uno stimolo esterno reale. Le allucinazioni sono usualmente persistenti e non confortevoli sebbene possono essere percepite raramente come piacevoli.

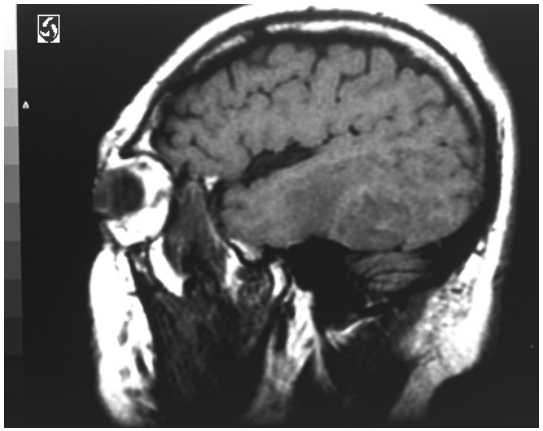
Allucinazioni Musicali

- **Ipoacusie:** più frequente, patologia legata ad un'accentuazione del mental imagery (Griffiths 200)

- **Patologia Psichiatrica** : depressione, schizophrenia, obsessive-compulsive disorder e alcolismo. (Berrios 1991).

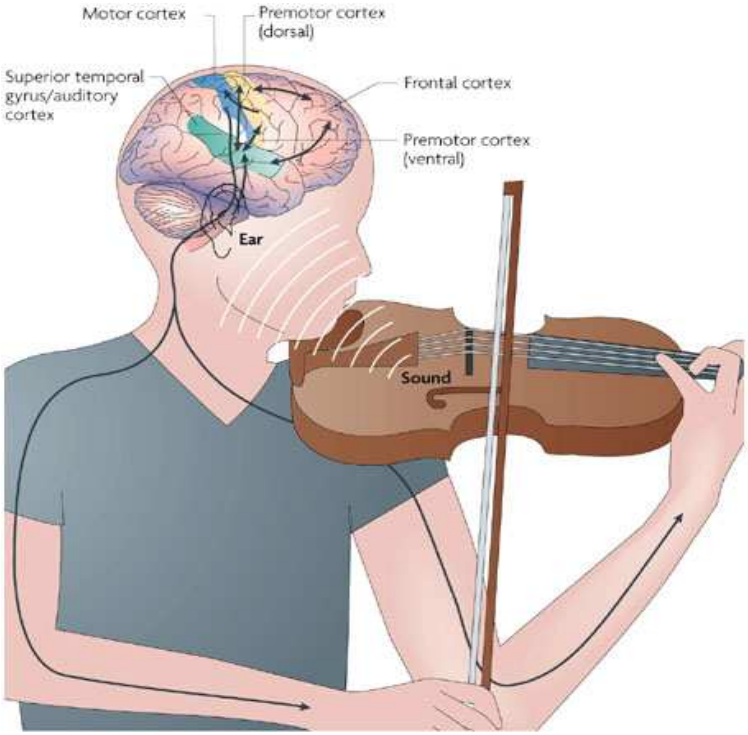
- **Patologia Neurologica:**
  Patologia a focolaio emisfriche destre, casi singoli in malattie degenerative (Berrios 1990, Mori 2006).



- **Iatrogena** : alcol, amfetamine, quinine, imipramina, fenotiazine, carbamazepina, fenitoina, procaine, propranololo e altri. (Fernandez; Gordon 1998; Roberts et al).

Distonie Focali Compito-Specifiche

Un disordine del movimento di natura involontaria caratterizzato da Co-Contrazioni muscolari degli agonisti e antagonisti, con diffusione a muscoli non coinvolti, assunzione di posture anomale in torsione (Fahn 1987).



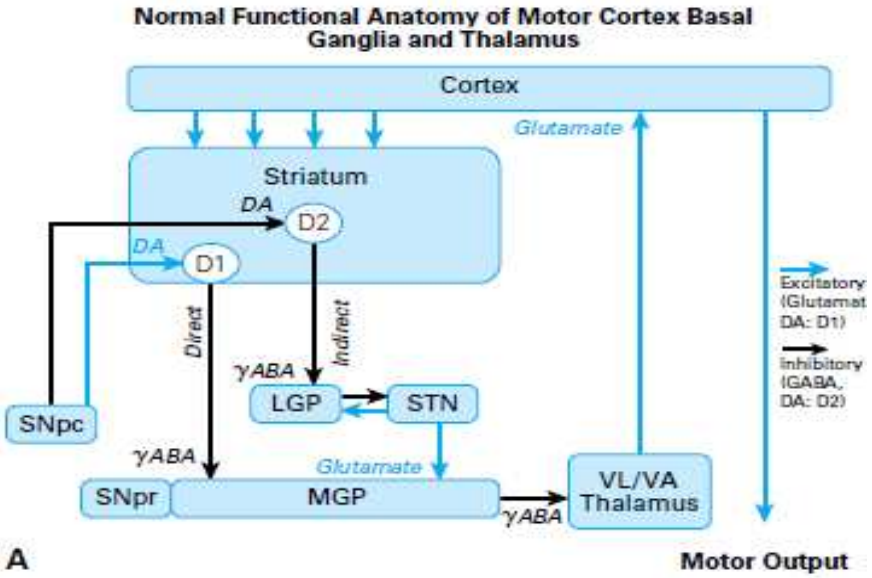
Pianoforte, Contrabbasso, Chitarra, Clarinetto.

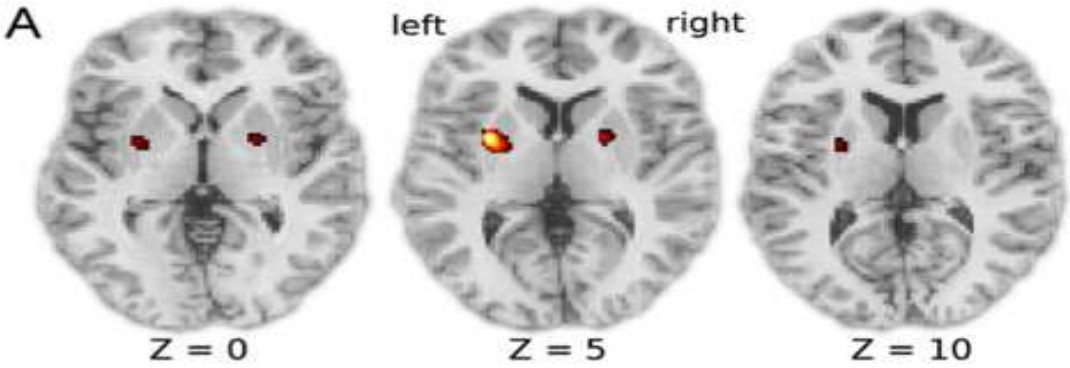
Distonie Focali Compito-Specifiche

Sensorimotor skills and focal dystonia are linked to putaminal grey-matter volume in pianists

Oliver Granert,[1] Martin Peller,[1,2] Hans-Christian Jabusch,[3,4] Eckart Altenmüller,[4] Hartwig Roman Siebner[1,2,5]

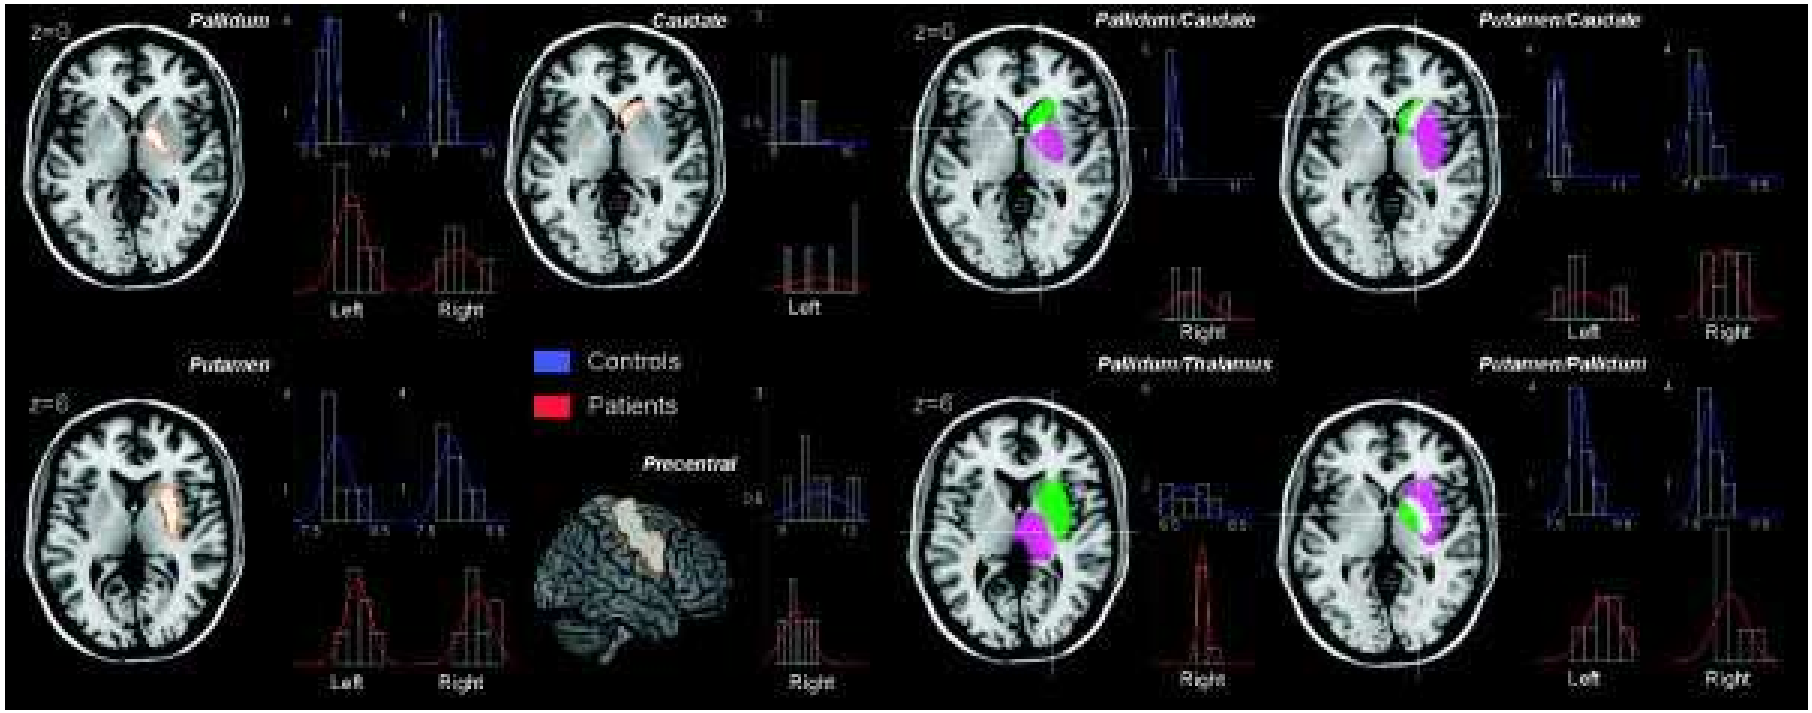
- **Diminuzione delle normali inibizioni corticali sui sistemi sottocorticali e spinali.**
- **Plasticità (maladattativa) patologica dovuta all' uso ripetitivo.**
- **Integrazione sensorimotoria disordinata**





Morfometria della sostanza Grigia.

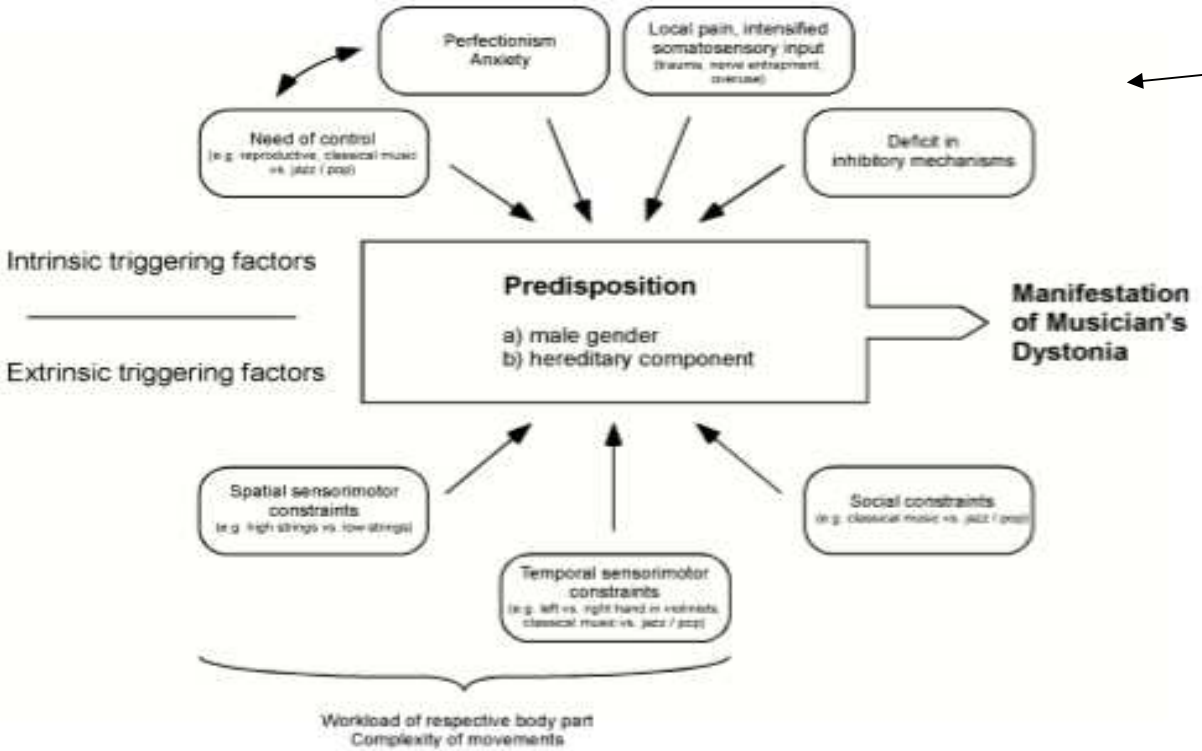
- **PET**: iperattività delle proiezioni fronto striatali.(metabolismo del glucosio aumentato in Putamen, Globus Pallidus, cervelletto e SMA).
- **Manual MRI morphometria**: abnormi dimensioni del putamen.
- **Voxel-based morphometry**: cambiamenti della sostanza grigia nei circuiti sensori-motori e nel cervelletto.
- **Diffusion tensor imaging (DTI)**: connettività alterata con interruzione del flusso di informazioni.

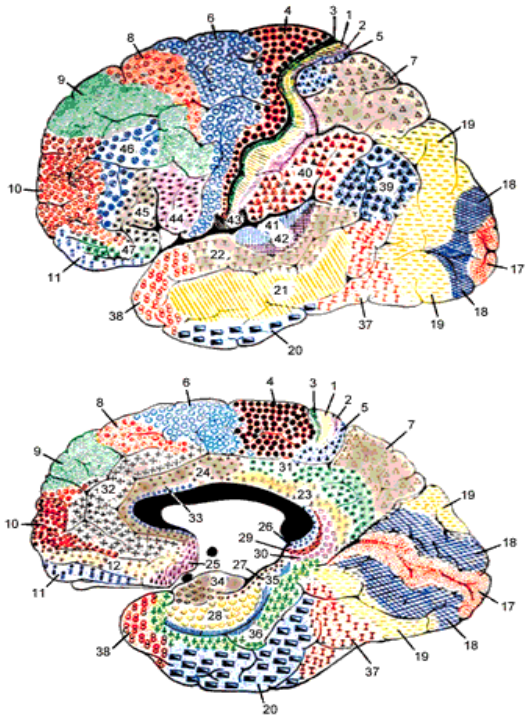


Focal dystonia in musicians: phenomenology, pathophysiology and triggering factors

E. Altenmüller and H.-C. Jabusch[1]

University for Music and Drama, Hannover, Institute for Music Physiology and Musicians' Medicine, Hannover, Germany





THE END…

Grazie dell’
Attenzione…
